## SERVICES

- COMPLIANCE
- MANAGED ANTIVIRUS
- MANAGED SIEM
- LOG MANAGEMENT
- INTRUSION DETECTION

## THE CHALLENGE

A web print company with an international presence and offices in the U.S. and Europe bought a SIEM for PCI compliance. They realized they did not have the time between staff to properly manage the SIEM, and how to fully utilize it for security and compliance. Rather than hire another employee they reached out to Sedara for the most cost effective solution.

## THE SOLUTION

Sedara started with a gap assessment including asset discovery, network analysis, log collection, vulnerability scanning, and host intrusion detection. Over 70 medium and higher risk vulnerabilities and over 600 configuration changes to improve network security, were discovered. Sedara worked with the company to implement configuration changes, fix vulnerabilities, and configure their SIEM. The company contracted Sedara to monitor their network, manage their SIEM, and maintain compliance.

## THE RESULT

The Web Print Company:

- Is now 100% legally PCI-DSS compliant.
- Did not have to hire more staff to have their network monitored and security managed by dedicated professionals.
- Saves time and money while maintaining robust network/info security.
